GI-Liver-Pancreas

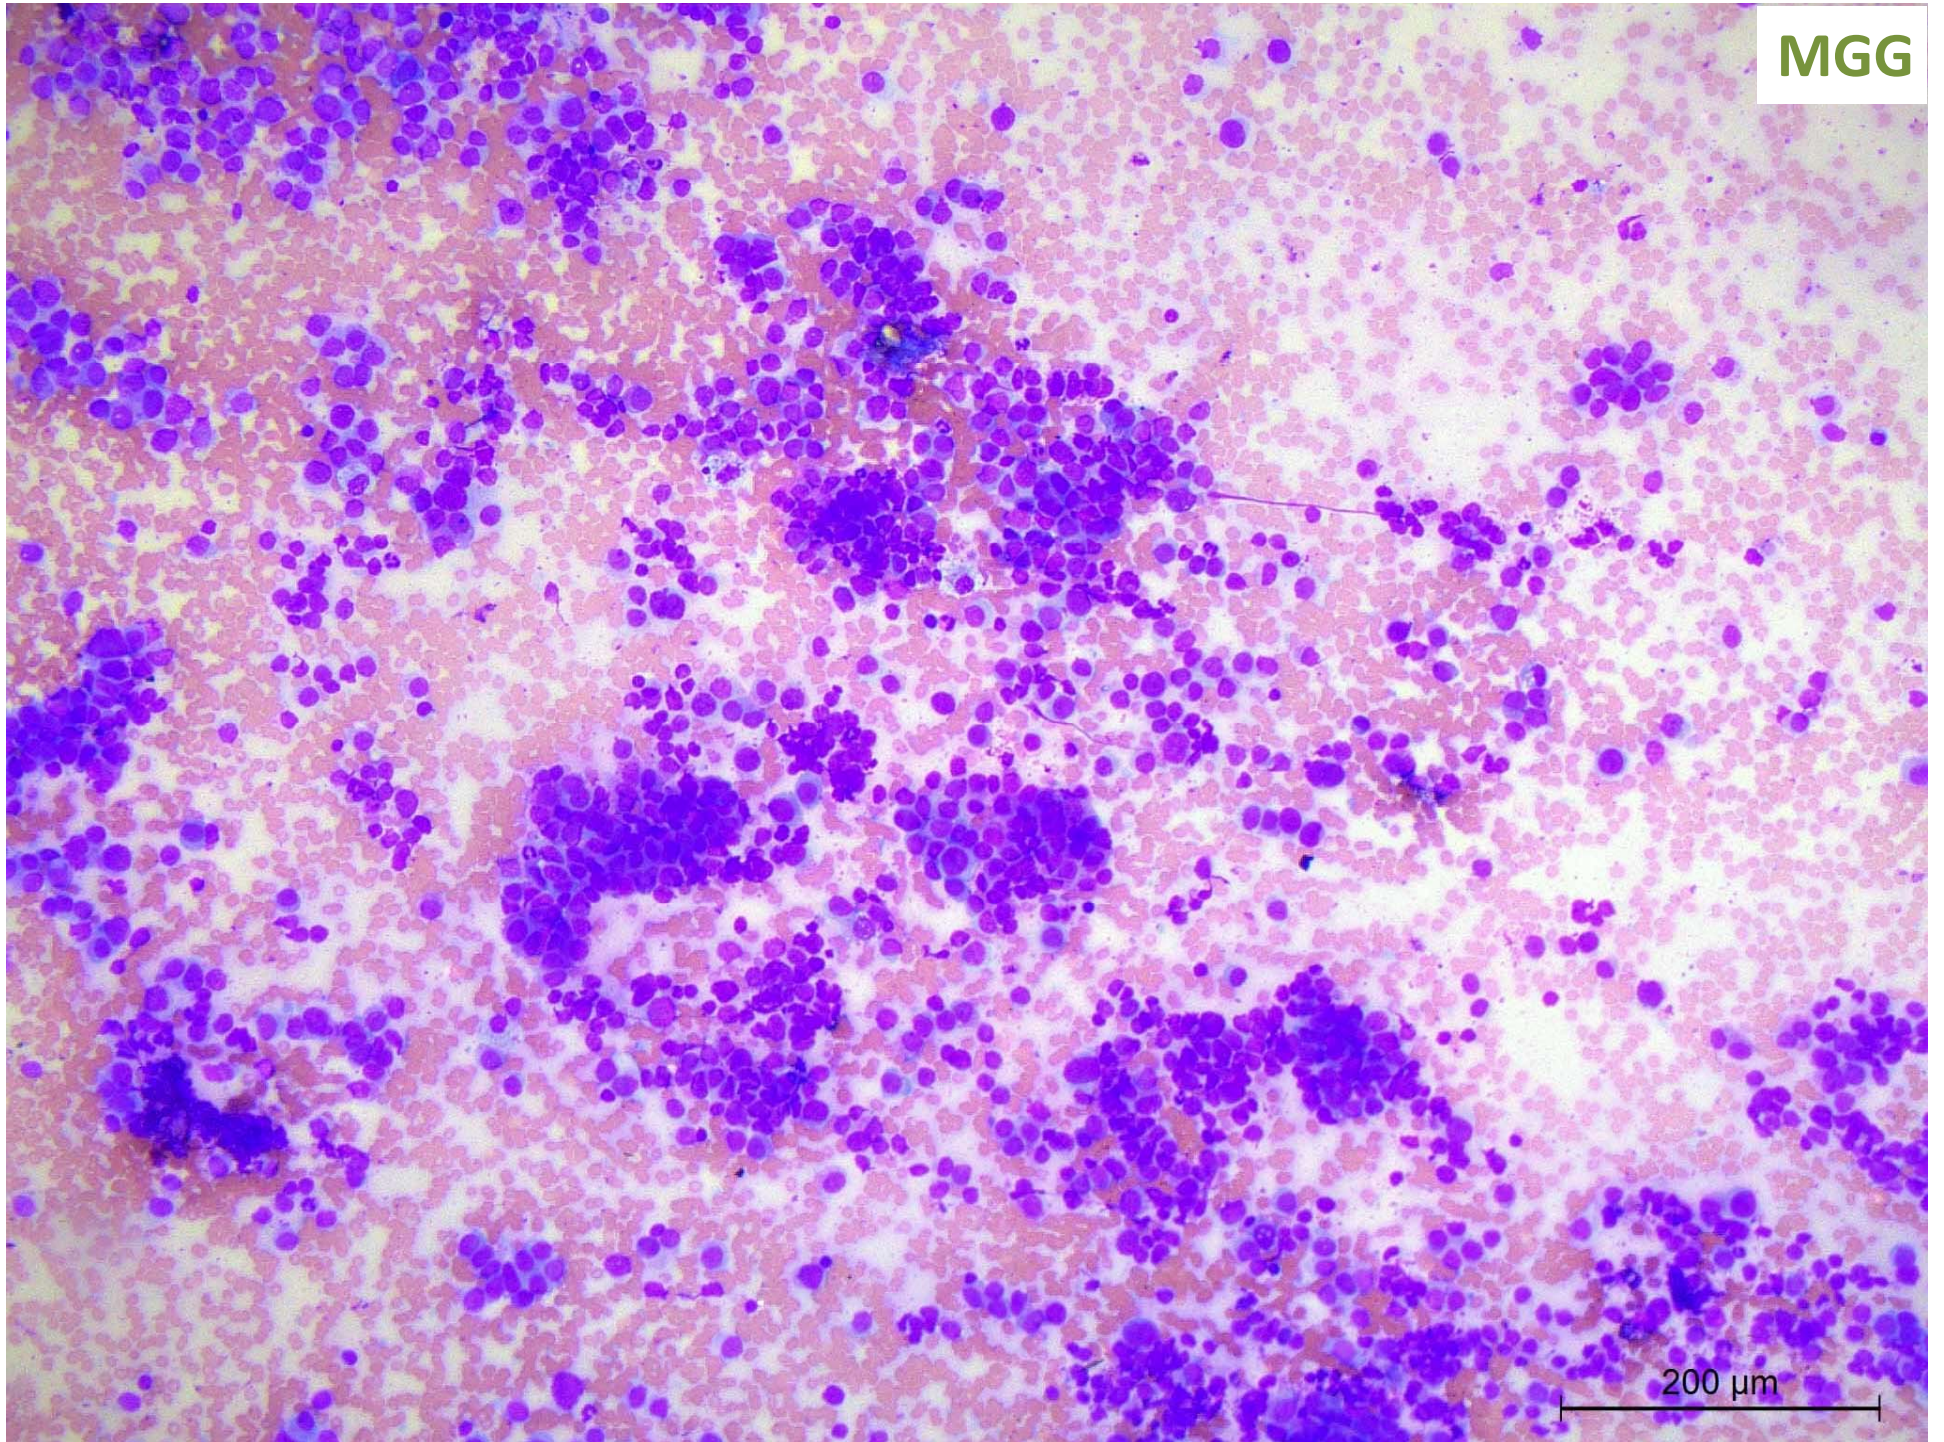

Case #1: Pancreas FNA

Monique Fabre
mofabre@gmail.com

Case #1: History

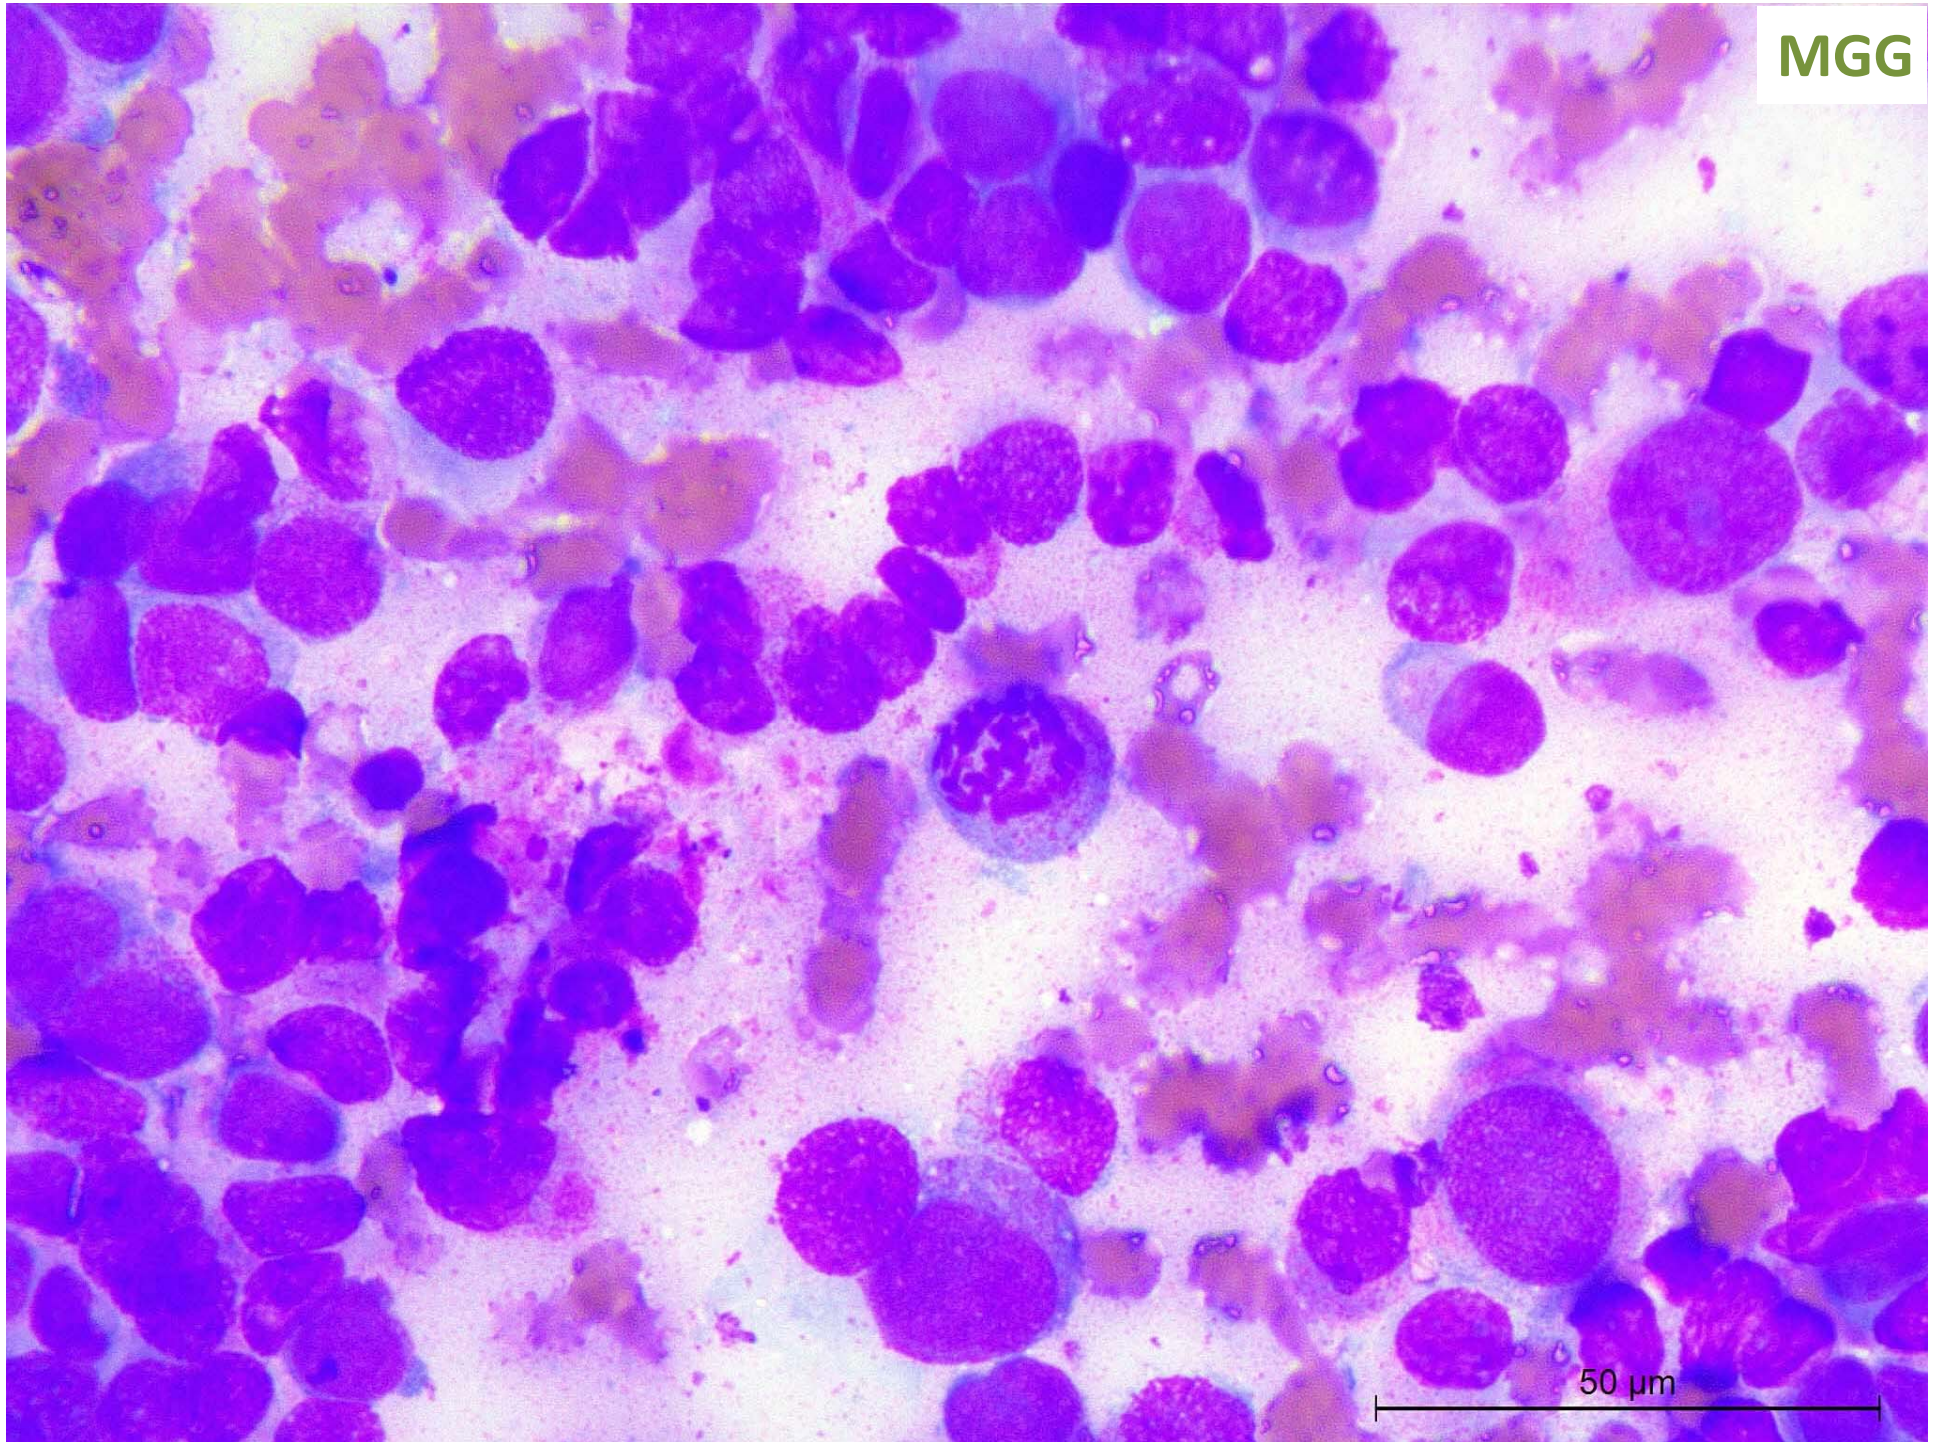

- 23-year-old woman complains of jaundice, fatigue, anorexia and weight loss, nausea and vomiting, and upper abdominal pain. These symptoms had all developed in rapid succession over the course of 3 weeks.
- On CT, enlargement of the pancreatic head (measuring 3 × 2 cm). On EUS, well-circumscribed solid mass, with contrast hyper-enhancement after iv Sonovue injection.
- EUS-FNA: smears, LBC, cell-block.

MGG

200 μ m

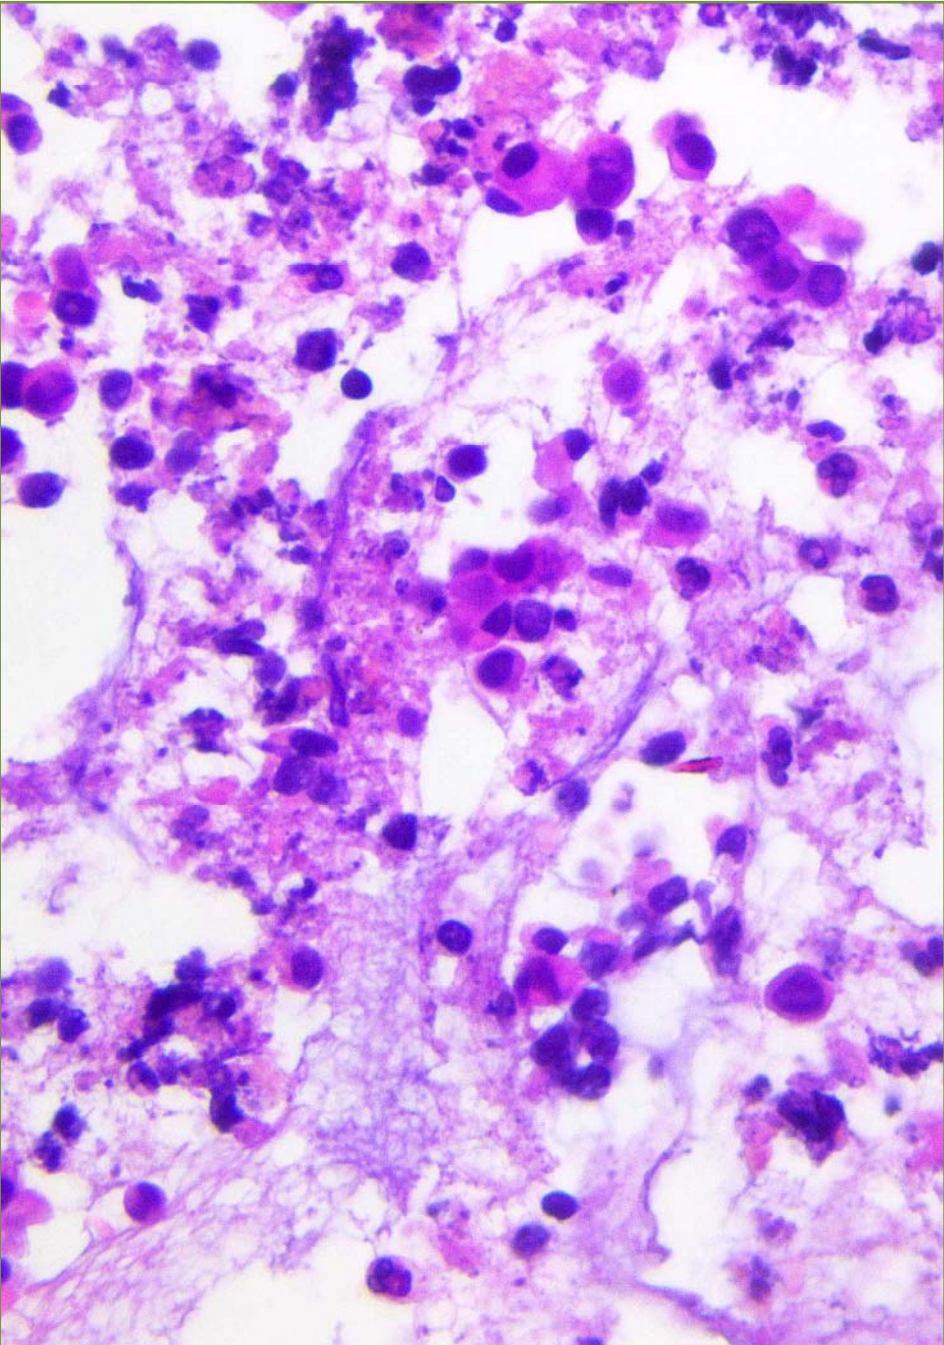

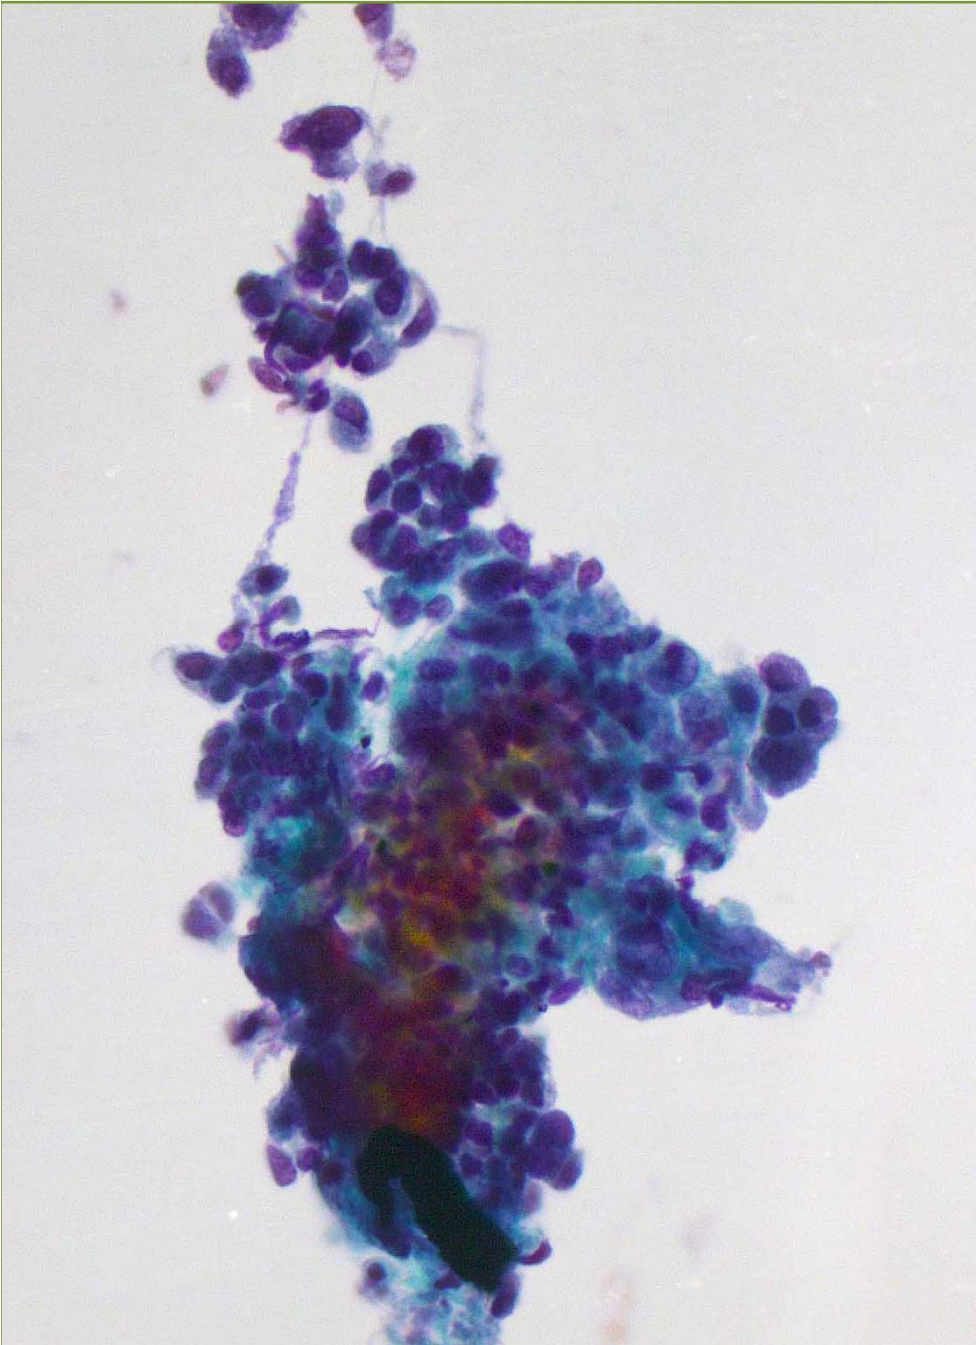

MGG

50 μ m

LBC: Papanicolaou

Cell-Block: HE

Case #1: Diagnosis?

1. Pancreatic ductal adenocarcinoma (PDAC)
2. Acinar cell carcinoma
3. Well-differentiated neuroendocrine tumor
4. Poorly-differentiated neuroendocrine carcinoma
5. Lymphoma
6. Metastasis to the pancreas
