37th European Congress of Cytology Dubrovnik-Cavtat, Croatia /1st October, 2012
Case #1: History

- 23-year-old woman complains of jaundice, fatigue, anorexia and weight loss, nausea and vomiting, and upper abdominal pain. These symptoms had all developed in rapid succession over the course of 3 weeks.

- On CT, enlargement of the pancreatic head (measuring $3 \times 2$ cm). On EUS, well-circumscribed solid mass, with contrast hyper-enhancement after iv Sonovue injection.

- EUS-FNA: smears, LBC, cell-block.
Case #1: Diagnosis?

1. Pancreatic ductal adenocarcinoma (PDAC)
2. Acinar cell carcinoma
3. Well-differentiated neuroendocrine tumor
4. Poorly-differentiated neuroendocrine carcinoma
5. Lymphoma
6. Metastasis to the pancreas
