Slide Seminar 2
GYNECOLOGICAL CYTOLOGY

Dr Minaxi Desai, CBE, FRCPath,
Clinical Head
Manchester Cytology Centre,
Director
Northwest Cytology Training Centre,
Manchester Royal Infirmary,
Manchester, M13 9WW
UK
1st Octoberber 2012
Case 1

Age 20 F
Routine call for first smear
L.M.P. Day 19
2 cervices and absence of vagina
Neo-vagina constructed at the age of 18
Neo vagina too long to visualise the cervices.
SurePath LBC sample received
Case 2

- 26 year old female.
- Negative smear histories in the past
- Asymptomatic
- Routine recall for cervical smear
- LMP 13 days
- SurePathLBC sample received
Case 3

- 39F
- Mother “died uterine ca age 35”
- Peutz Jeghers syndrome in family
- Chronic fatigue syndrome
  AND
- H/O Vertigo, Diabetes, Asthma, Epilepsy
- Under care of gynaecologist due to excessive discharge and vulvitis
- Polycystic ovarian syndrome - given dianette then metformil
- Cervix looked normal except erosion
- 13 conventional cervical samples between 1989 and 2007-all reported as negative
- Repeated cryotherapy for erosion
- Excessive mucinous discharge continued
- Further cytology samples sent by Gynaecologists: in 2008 conventional and in 2009 SP sample. Both reported as negative
- Decided to do cone biopsy
- Patient requested hysterectomy due to menorrhagia
